Center clone name: 91_I_3
-----
* NOTE: This record contains 83 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

Worley, K.C.  
Direct Submission  
Submitted (25-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
3 (bases 1 to 421172)  
Rat Genome Sequencing Consortium.  
Submitted (11-OCT-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Oct 11, 2002 this sequence version replaced gi:21743603.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Summary Statistics  
Assembly program: Phrap; version 0.990329  
Consensus quality: 302679 bases at least Q40  
Consensus quality: 309380 bases at least Q30  
Consensus quality: 313052 bases at least Q20  
Estimated insert size: 328717; sum-of-contigs estimation  
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html))  
\* NOTE: This sequence may represent more than one clone.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 18 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

COMMENT

\* NOTE: This record contains 166 individual.  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

* NOTE: This is a 'working draft' sequence. It currently
* consists of 23 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

 -----  
 \* NOTE: Estimated insert size may differ from sequence length  
 \* (see http://www.hgsc.bcm.tmc.edu/docs/genbank\_draft\_data.html)  
 \* NOTE: The config are based on the application  
 \* of the PGI method using the human genome (NCBI build 31)  
 \* as the comparative genome.  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 1 contigs. Gaps between the contigs  
 \* are represented as runs of N. The order of the pieces  
 \* is believed to be correct as given, however the sizes  
 \* of the gaps between them are based on estimates that have  
 \* provided by the submitter.  
 \* This sequence will be replaced  
 \* by the finished sequence as soon as it is available and  
 \* the accession number will be preserved.  
 1 158981: config of 158981 bp in length.

Direct Submission

Submitted (09-APR-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

----- Genome Center -----

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: [hgsc-help@bcm.tmc.edu](mailto:hgsc-help@bcm.tmc.edu)

----- Project Information -----

Center project name: LCIP

Center clone name: CH250-271024

----- Summary Statistics -----

Chemistry: Dye-primer Bodyby: inf% of reads

Chemistry: Dye-terminator Big Dye: inf% of reads

Consensus quality: 7017 bases at least Q40

Consensus quality: 8529 bases at least Q30

Consensus quality: 10199 bases at least Q20

----- NOTE: -----

NOTE: Estimated insert size may differ from sequence length

NOTE: (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html))

NOTE: The contigs are based on the application

NOTE: of the PGI method using the Human genome (NCBI build 31)

NOTE: as the comparative genome.

NOTE: This is a 'working draft' sequence. It currently

NOTE: consists of 1 contigs. Gaps between the contigs

NOTE: are represented as runs of N. The order of the pieces

NOTE: is believed to be correct as given, however the sizes

NOTE: of the gaps between them are based on estimates that have

NOTE: provided by the submitter.

NOTE: This sequence will be replaced

NOTE: by the finished sequence as soon as it is available and

NOTE: the accession number will be preserved.

1 176565: contig of 176565 bp in length.

Rat Genome Sequencing Consortium.
Submitted (19-NOV-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 19, 2002 this sequence version replaced gi:23196214.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Summary Statistics

Assembly program: XGAP4; version 4.5

Chemistry: Dye-terminator; 100% of reads

Consensus quality: 188805 bases at least Q40

Consensus quality: 189699 bases at least Q30

Consensus quality: 190483 bases at least Q20

Insert size: 19313; sum-of-contigs

Insert size: 203739; 6.5% error; agarose-gel

Quality coverage: 6.93x in Q20 bases; sum-of-contigs Quality coverage: 6.71x in Q20 bases; agarose-tp

\*\*\*\*\*  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 15 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
            On Nov 19, 2002 this sequence version replaced gi:22907669.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/atlantis/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

TITLE Direct Submission  
JOURNAL Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

## COMMENT

On May 10, 2003 this sequence version replaced gi:23269275. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

Project Information

Center project name: GFTL

Center clone name: CH230-137022

## ----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 204318 bases at least Q40

Consensus quality: 205639 bases at least Q30

Consensus quality: 206762 bases at least Q20

Estimated insert size: 213544; sum-of-contigs estimation

Quality coverage: 7x in Q20 bases; sum-of-contigs estimation

\* NOTE: Estimated insert size may differ from sequence length (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

TITLE      JOURNAL
REFERENCE      Submitted (12-JAN-2002) Human Genome Sequencing Center, Department
AUTHORS      of Molecular and Human Genetics, Baylor College of Medicine, One
        Baylor Plaza, Houston, TX 77030, USA
        3 (bases 1 to 222632)
REFERENCE      Rat Genome Sequencing Consortium.
AUTHORS      Direct Submission
        Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
        of Molecular and Human Genetics, Baylor College of Medicine, One
        Baylor Plaza, Houston, TX 77030, USA
        On May 10, 2003 this sequence version replaced gi:24953991.
        The sequence in this assembly is a combination of BAC based reads
        and whole genome shotgun sequencing reads assembled using Atlas
        (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
        in the feature table below represents a scaffold in the Atlas
        assembly (a 'contig-scaffold'). Within each contig-scaffold,
        individual sequence contigs are ordered and oriented, and separated
        by sized gaps filled with Ns to the estimated size. The sequence
        may extend beyond the ends of the clone and there may be sequence
        contigs within a contig-scaffold that consist entirely of whole
        genome shotgun sequence reads. Both end sequences and whole genome
        shotgun sequence only contigs will be indicated in the feature
        table.

Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: GHKJ
Center clone name: CH230-137L21
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 182183 bases at least Q40
Consensus quality: 186060 bases at least Q30
Consensus quality: 189005 bases at least Q20
Estimated insert size: 191530; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_diff_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 3 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 202667: contig of 202667 bp in length
* 202668 202767: gap of unknown length
* 202768 221218: contig of 18451 bp in length
* 221219 221318: gap of unknown length

```

```
FEATURES      * 221319 222632: contig of 1314 bp in length.

            Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
            On May 10, 2003 this sequence version replaced gi:25186677.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (16-FEB-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Nov 9, 2002 this sequence version replaced gi:2321713.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.bsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Rat Genome Sequencing Consortium.
Direct Submission
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On May 10, 2003 this sequence version replaced gi:24819714.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

 Direct Submission  
 Submitted (19-NOV-2002) Human Genome Sequencing Center, Department  
 of Molecular and Human Genetics, Baylor College of Medicine, One  
 Baylor Plaza, Houston, TX 77030, USA  
 On Nov 19, 2002 this sequence version replaced gi:23195038.  
 The sequence in this assembly is a combination of BAC based reads  
 and whole genome shotgun sequencing reads assembled using Atlas  
 (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described  
 in the feature table below represents a scaffold in the Atlas  
 assembly (a 'contig-scaffold'). Within each contig-scaffold,  
 individual sequence contigs are ordered and oriented, and separated  
 by sized gaps filled with Ns to the estimated size. The sequence  
 may extend beyond the ends of the clone and there may be sequence  
 contigs within a contig-scaffold that consist entirely of whole  
 genome shotgun sequence reads. Both end sequences and whole genome  
 shotgun sequence only contigs will be indicated in the feature  
 table.

of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA

On May 9, 2003 this sequence version replaced gi:23265699.  
The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

      of Molecular and Human Genetics, Baylor College of Medicine, One
      Baylor Plaza, Houston, TX 77030, USA
      On Sep 21, 2002 this sequence version replaced gi:21908454.
      The sequence in this assembly is a combination of BAC based reads
      and whole genome shotgun sequencing reads assembled using Actis
      (http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the
      sequence may extend beyond the ends of the clone and there may be
      contigs that consist entirely of whole genome shotgun sequence
      reads. Both end sequences and whole genome shotgun sequence only
      contigs will be indicated in the feature table.

Baylor Plaza, Houston, TX 77030, USA
3 (bases 1 to 259219)
Rat Genome Sequencing Consortium.
Direct Submission
Submitted (08-OCT-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Sep 23, 2002 this sequence version replaced gi:21737508.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Project Information
Center project name: GPGQ
Center clone name: CH230-121024
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 222280 bases at least Q40
Consensus quality: 226331 bases at least Q30
Consensus quality: 228820 bases at least Q20
Estimated insert size: 250992; sum-of-contigs estimation
Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html) .
* NOTE: This sequence may represent more than one clone.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 8 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
1 87120: contig of 87120 bp in length

COMMENT

The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu

----- Project Information
Center project name: GCCR
Center clone name: CH230-7M3
----- Summary Statistics
Assembly program: Atlas;
Consensus quality: 241903 bases at least Q40
Consensus quality: 247369 bases at least Q30
Estimated insert size: 268229; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)

```

\* NOTE: This sequence may represent more than one clone.  
 \* NOTE: This is a 'working draft' sequence. It currently  
 \* consists of 6 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

1 6190: contig of 6190 bp in length  
 \* 6191 6290: gap of unknown length  
 \* 6291 10708: contig of 4418 bp in length  
 \* 10709 10808: gap of unknown length  
 \* 10809 255931: contig of 246123 bp in length  
 \* 255932 257031: gap of unknown length  
 \* 257032 272937: contig of 15906 bp in length  
 \* 272938 273038: gap of unknown length  
 \* 273038 276081: contig of 3044 bp in length  
 \* 276082 276181: gap of unknown length  
 \* 276182 278311: contig of 2130 bp in length.

Rat Genome Sequencing Consortium.  
Direct Submission  
Submitted (11-OCT-2002) Human Genome Sequencing Center, Department  
of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA  
On Oct 9, 2002 this sequence version replaced gi:21736956.  
The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

----- Genome Center  
Center: Baylor College of Medicine  
Center code: BCM  
Web site: http://www.hgsc.bcm.tmc.edu/  
Contact: hgsc-help@bcm.tmc.edu  
----- Project Information  
Center project name: GNM7  
Center clone name: CH230-336G16  
----- Summary Statistics  
Assembly program: Phrap, version 0.990329  
Consensus quality: 228462 bases at least Q40  
Consensus quality: 234940 bases at least Q30  
Consensus quality: 239424 bases at least Q20  
Estimated insert size: 232995; sum-of-contigs estimation  
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

----- NOTE: Estimated insert size may differ from sequence length  
(see http://www.hgsc.bcm.tmc.edu/docs/genbank\_difft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 16 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

NOTE: This record contains 33 individual  
 \* sequencing reads that have not been assembled into  
 \* contigs. Runs of N are used to separate the reads  
 \* and the order in which they appear is completely  
 \* arbitrary. Low-pass sequence sampling is useful for  
 \* identifying clones that may be gene-rich and allows  
 \* overlap relationships among clones to be deduced.  
 \* However, it should not be assumed that this clone  
 \* will be sequenced to completion. In the event that  
 \* the record is updated, the accession number will  
 \* be preserved.

-----  
\* NOTE: This record contains 59 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

Rhabdilitida; Rhabdilitidae; Peioderinae; Caenorhabditis.  
1 (bases 1 to 51920)  
Sulston, J.  
Direct Submission  
Submitted (14-OCT-1998) Nematode Sequencing Project, Sanger Centre,  
Hinxton, Cambridge CB10 1RO, UK and Department of Genetics,  
Washington University, St. Louis, MO 63110, USA. E-mail:  
jesse.sanger@wustl.edu  
On Aug 3, 1998 this sequence version replaced gi:166615.  
IMPORTANT: This sequence is unfinished and does not necessarily  
represent the correct sequence. Work on the sequence is in progress  
and the release of this data is based on the understanding that the  
sequence may change as work continues. The sequence may be  
contaminated with foreign sequence from E.coli, yeast, vector,  
phage etc. Order of segments is not known; 800 n's separate  
segments.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 15 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

TITLE  
JOURNAL  
COMMENT  
Submitted (23-NOV-2001) Whitehead Institute/MIT Center for Genome Research, 320 Charles Street, Cambridge, MA 02141, USA  
All repeats were identified using RepeatMasker:  
Smit, A.F.A. & Green, P. (1996-1997)  
<http://ftp.genome.washington.edu/RM/RepeatMasker.html>

Center: Whitehead Institute/ MIT Center for Genome Research  
Center code: WIBR  
Web site: <http://www-seq.wi.mit.edu>  
Contact: [sequence\\_submissions@genome.wi.mit.edu](mailto:sequence_submissions@genome.wi.mit.edu)  
Project Information  
Center project name: L16494  
Center clone name: 110\_N\_1

NOTE: This record contains 74 individual  
sequencing reads that have not been assembled into  
contigs. Runs of N are used to separate the reads  
and the order in which they appear is completely  
arbitrary. Low-pass sequence sampling is useful for  
identifying clones that may be gene-rich and allows  
overlap relationships among clones to be deduced.  
However, it should not be assumed that this clone  
will be sequenced to completion. In the event that  
the record is updated, the accession number will  
be preserved.

Project Information  
Center project name: 77\_A\_24  
Center clone name: 77\_A\_24

\* NOTE: This record contains 73 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

```

\* NOTE: This is a 'working draft' sequence. It currently consists of 25 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: This record contains 76 individual
* sequencing reads that have not been assembled into
* contigs. Runs of N are used to separate the reads
* and the order in which they appear is completely
* arbitrary. Low-pass sequence sampling is useful for
* identifying clones that may be gene-rich and allows
* overlap relationships among clones to be deduced.
* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

NOTE: This record contains 80 individual  
 sequencing reads that have not been assembled into  
 contigs. Runs of N are used to separate the reads  
 and the order in which they appear is completely  
 arbitrary. Low-pass sequence sampling is useful for  
 identifying clones that may be gene-rich and allows  
 overlap relationships among clones to be deduced.  
 However, it should not be assumed that this clone  
 will be sequenced to completion. In the event that  
 the record is updated, the accession number will  
 be preserved.

 Project Information  
 Center project name: L26856

Center clone name: 135\_G\_22

NOTE: This record contains 79 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will be preserved.

 ----- Project Information  
 Center project name: L3591  
 Center clone name: 16\_N23  
 -----  
 \* NOTE: This record contains 78 individual  
 \* sequencing reads that have not been assembled into  
 \* contigs. Runs of N are used to separate the reads  
 \* and the order in which they appear is completely  
 \* arbitrary. Low-pass sequence sampling is useful for  
 \* identifying clones that may be gene-rich and allows  
 \* overlap relationships among clones to be deduced.  
 \* However, it should not be assumed that this clone  
 \* will be sequenced to completion. In the event that  
 \* the record is updated, the accession number will  
 \* be preserved.

Center clone name: 542\_F\_4

\* NOTE: This record contains 81 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

1 737: contig of 737 bp in length  
\* 738 837: gap of 100 bp

TITLE  
JOURNAL  
COMMENT

arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

Direct Submission  
Submitted (17-FEB-2001) Whitehead Institute/MIT Center for Genome  
Research, 320 Charles Street, Cambridge, MA 02141, USA  
On Nov 22, 2001 this sequence version replaced gi:14029927.  
All repeats were identified using RepeatMasker:  
Smit, A.F.A. & Green, P. (1996-1997)  
http://ftp.genome.washington.edu/RM/RepeatMasker.html

-----  
\* NOTE: This record contains 90 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

## TITLE JOURNAL COMMENT

Submitted (22-NOV-2001) Whitehead Institute/MIT Center for Genome  
Research, 320 Charles Street, Cambridge, MA 02141, USA  
All repeats were identified using RepeatMasker:  
Smit, A.F.A. & Green, P. (1996-1997)  
http://ftp.genome.washington.edu/RM/RepeatMasker.html

----- Genome Center  
Center: Whitehead Institute/ MIT Center for Genome Research  
Center code: WIBR  
Web site: http://www.seq.wi.mit.edu  
Contact: sequence\_submissions@genome.wi.mit.edu  
----- Project Information  
Center project name: 167\_K\_24  
Center clone name: 167\_K\_24

\* NOTE: This record contains 71 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

----- Project Information -----  
Center project name: L7962  
Center clone name: 27\_H\_21

NOTE: This record contains 84 individual  
sequencing reads that have not been assembled into  
contigs. Runs of N are used to separate the reads  
and the order in which they appear is completely  
arbitrary. Low-pass sequence sampling is useful for  
identifying clones that may be gene-rich and allows  
overlap relationships among clones to be deduced.  
However, it should not be assumed that this clone  
will be sequenced to completion. In the event that  
the record is updated, the accession number will  
be preserved.

Direct Submission  
Submitted (14-FEB-2000) Whitehead Institute/MIT Center for Genome  
Research, 320 Charles Street, Cambridge, MA 02141, USA  
On Jul 13, 2000 this sequence version replaced gi:6970673.  
All repeats were identified using RepeatMasker:  
Smit, A.F.A. & Green, P. (1996-1997)  
<http://ftp.genome.washington.edu/RM/RepeatMasker.html>

Center: Whitehead Institute/ MIT Center for Genome Research

----- Project Information -----  
Center project name: L6552  
Center clone name: 734\_K\_12

\* NOTE: This record contains 79 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

Center clone name: 351\_F\_2

\* NOTE: This record contains 79 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

TITLE
Submitted (21-MAR-2003) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
JOURNAL
----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
Project Information
Center project name: GM02
Center clone name: CH230-21H3
----- Summary Statistics
Sequencing vector: Plasmid
Chemistry: Dye-terminator Big Dye 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 69017 bases at least Q40
Consensus quality: 78942 bases at least Q30
Consensus quality: 85937 bases at least Q20
Estimated insert size: 76134; sum-of-contigs estimation
Quality coverage: 1x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 50 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

COMMENT  
Submitted (26-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Sep 26, 2002 this sequence version replaced gi:13661933.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information  
 Center project name: HAVU  
 Center clone name: RP11-98J5  
 Sequencing vector: M13, L08821  
 Chemistry: Dye-terminator Big Dye 73% of reads  
 Assembly program: Phrap, version 0.990325First call to  
 findPhrapList

Consensus quality: 369571 bases at least Q40  
 Consensus quality: 395345 bases at least Q30  
 Consensus quality: 411294 bases at least Q20  
 Estimated insert size: 393000; sum-of-contigs estimation  
 Quality coverage: 0x in Q20 bases; agarose-tp estimation  
 Quality coverage: 4.4x in Q20 bases; sum-of-contigs estimation

\* NOTE: Estimated insert size may differ from sequence length  
 \* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html))  
 \* NOTE: This sequence may represent more than one clone.  
 \* NOTE: This is a 'working draft' sequence. It currently

\* consists of 101 contigs. The true order of the pieces  
 \* is not known and their order in this sequence record is  
 \* arbitrary. Gaps between the contigs are represented as  
 \* runs of N, but the exact sizes of the gaps are unknown.  
 \* This record will be updated with the finished sequence  
 \* as soon as it is available and the accession number will  
 \* be preserved.

----- Summary Statistics
Assembly program: XGAP4; version 4.5
Sequencing vector: Plasmid; 108752; 100% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Consensus quality: 122442 bases at least Q40
Consensus quality: 126008 bases at least Q30
Consensus quality: 128093 bases at least Q20
Insert size: 130600; sum-of-contigs
Insert size: 151036; 12.1% error; agarose-fp
Quality coverage: 3.42x in Q20 bases; sum-of-contigs
Quality coverage: 3.13x in Q20 bases; agarose-fp
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 21 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

Project Information

Center project name: L18567

Center clone name: 22\_C\_8

NOTE: This record contains 162 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

AC141918

\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 118 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

1 1251: contig of 1251 bp in length  
1252 1351: gap of 100 bp  
1352 3264: contig of 1913 bp in length  
3265 3364: gap of 100 bp  
3365 4425: contig of 1061 bp in length  
4426 4525: gap of 100 bp  
4526 5017: contig of 492 bp in length  
5018 5117: gap of 100 bp  
5118 6184: contig of 1067 bp in length  
6185 6284: gap of 100 bp  
6285 6954: contig of 670 bp in length  
6955 7054: gap of 100 bp  
7055 9463: contig of 2408 bp in length  
9463 9563: gap of 100 bp  
9563 10280: contig of 718 bp in length  
10281 10380: gap of 100 bp  
10381 10681: contig of 301 bp in length  
10682 10781: gap of 100 bp  
10782 12517: contig of 1736 bp in length  
12518 12617: gap of 100 bp  
12618 13628: contig of 1011 bp in length  
13629 13728: gap of 100 bp  
13729 14193: contig of 465 bp in length  
14194 14293: gap of 100 bp  
14294 14692: contig of 399 bp in length  
14693 14792: gap of 100 bp  
14793 15257: contig of 465 bp in length  
15258 15357: gap of 100 bp  
15358 15741: contig of 384 bp in length  
15742 15841: gap of 100 bp  
15842 16024: contig of 183 bp in length

Project Information

Center project name: KEIG  
Center clone name: CH230-341123

Summary Statistics

Sequencing vector: Plasmid;  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990329  
Consensus quality: 137103 bases at least Q40  
Consensus quality: 138905 bases at least Q30  
Consensus quality: 140423 bases at least Q20  
Estimated insert size: 138648; sum-of-contigs estimation  
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length  
(see [http://www.hgsc.bcm.tmc.edu/docs/Genbankdraft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbankdraft_data.html)).  
NOTE: This is a 'working draft' sequence. It currently  
consists of 20 contigs. The true order of the pieces  
is not known and their order in this sequence record is  
arbitrary. Gaps between the contigs are represented as  
runs of N, but the exact sizes of the gaps are unknown.  
This record will be updated with the finished sequence  
as soon as it is available and the accession number will  
be preserved.

## COMMENT

Submitted (24-MAR-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Mar 24, 2003 this sequence version replaced gi:29135377.

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: [hgsc-help@bcm.tmc.edu](mailto:hgsc-help@bcm.tmc.edu)

Center project name: XEJT

Center clone name: CH230-43516

Sequencing vector: Plasmid

Chemistry: Dye-terminator Big Dye 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 122876 bases at least Q40

Consensus quality: 127474 bases at least Q30

Consensus quality: 131284 bases at least Q20

Estimated insert size: 121256; sum-of-contigs estimation

Quality coverage: 3x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html)).

NOTE: This is a 'working draft' sequence. It currently

consists of 62 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

\* runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence

\* as soon as it is available and the accession number will

\* be preserved.

```

----- Project Information  
Center project name: LAUI  
Center clone name: CH250-269A1  
----- Summary Statistics  
Chemistry: Dye-terminator Big Dye; inf% of reads  
Consensus quality: 5823 bases at least Q40  
Consensus quality: 6614 bases at least Q30  
Consensus quality: 7584 bases at least Q20  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html))  
\* NOTE: The contigs are based on the application  
\* of the PGI method using the human genome (NCBI build 31)  
\* as the comparative genome.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 1 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
1 145555: contig of 145555 bp in length.

----- Project Information

Center project name: L2687

Center clone name: 2\_O\_24

NOTE: This record contains 148 individual  
\* sequencing reads that have not been assembled into  
\* contigs. Runs of N are used to separate the reads  
\* and the order in which they appear is completely  
\* arbitrary. Low-pass sequence sampling is useful for  
\* identifying clones that may be gene-rich and allows  
\* overlap relationships among clones to be deduced.  
\* However, it should not be assumed that this clone  
\* will be sequenced to completion. In the event that  
\* the record is updated, the accession number will  
\* be preserved.

----- Project Information
Center project name: KERN
Center clone name: CH230-524N23
----- Summary Statistics
Sequencing vector: Plasmid
Chemistry: Dye-terminator Big Dye 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 134150 bases at least Q40
Consensus quality: 140679 bases at least Q30
Consensus quality: 145481 bases at least Q20
Estimated insert size: 131271; sum-of-contigs estimation
Quality coverage: 2x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/genbankdraft_data.html).
* NOTE: This is a "working draft" sequence. It currently
* consists of 56 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

----- Project Information -----
Center project name: KSHB
Center clone name: CH230-516H6
----- Summary Statistics -----
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 140432 bases at least Q40
Consensus quality: 143346 bases at least Q40
Consensus quality: 145310 bases at least Q30
Estimated insert size: 145510; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation
----- NOTE: Estimated insert size may differ from sequence length -----
(see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
* NOTE: This is a working draft sequence. It currently
* consists of 19 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

COMMENT
Groveomont Circle, Gaithersburg, MD 20877, USA
On May 23, 2002 this sequence version replaced gi:14327785.
----- Genome Center
Center: NIH Intramural Sequencing Center
Center code: NISC
Web site: http://www.nisc.nih.gov
Contact: nisc.zoo@nih.gov
----- Project Information
Center project name: ctd
Center clone name: 145H12

The sequence data in this record represents an 'enhanced'
version of a Phase 2 submission. Specifically, the indicated
order and orientation of each sequence contig has been
established using one or more of the following: read-pair
data from individual subclones, overlaps with neighboring
clones, alignment with available reference sequence (e.g.,
human), and/or confirmation by PCR testing. In addition,
the sequence assembly is based on at least 8X average
coverage in Q20 bases and has been reviewed to rule out
gross misassemblies, the low-quality ends of sequence
contigs have been trimmed away, and each base is associated
with a Phrap-derived quality score.
----- Summary Statistics
Sequencing vector: plasmid; n/a; 100% of reads
Chemistry: Dye-terminator Big Dye 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 149914 bases at least Q40
Consensus quality: 150239 bases at least Q30
Consensus quality: 150421 bases at least Q20
Insert size: 130000; agarose-fp
Insert size: 150567; sum-of-contigs
Quality coverage: 13.36x in Q20 bases; agarose-fp
Quality coverage: 11.53x in Q20 bases; sum-of-contigs
-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 5 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
*

  Web site: http://www.hgsc.bcm.tmc.edu/
  Contact: hgsc-help.tmc.edu
  Project Information
  Center project name: FBGY
  Center clone name: CH240-312P22
  ----- Summary Statistics
  Sequencing vector: Plasmid
  Chemistry: Dye-terminator Big Dye: 100% of reads
  Assembly program: Phrap; version 0.990329
  Consensus quality: 152191 bases at least Q40
  Consensus quality: 155092 bases at least Q30
  Consensus quality: 158513 bases at least Q20
  Estimated insert size: 162494, sum-of-contigs estimation
  Estimated insert size: 165056, agarose-fp estimation
  Quality coverage: 3x in Q20 bases; agarose-fp estimation
  Quality coverage: 3x in Q20 bases; sum-of-contigs estimation
  -----
  * NOTE: Estimated insert size may differ from sequence length
  * (see http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html).
  * NOTE: This is a 'working draft' sequence. It currently
  * consists of 16 contigs. The true order of the pieces
  * is not known and their order in this sequence record is
  * arbitrary. Gaps between the contigs are represented as
  * runs of N, but the exact sizes of the gaps are unknown.
  * This record will be updated with the finished sequence
  * as soon as it is available and the accession number will
  * be preserved.

            Center clone name: 24_B_21
            -----
            * NOTE: This record contains 167 individual
            * contigs. Reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.

```

```

* However, it should not be assumed that this clone
* will be sequenced to completion. In the event that
* the record is updated, the accession number will
* be preserved.

## JOURNAL

## COMMENT

Submitted (14-SEP-2004) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Sep 14, 2004 this sequence version replaced gi:51172638.

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: hgsc-help.tmc.edu

Project Information

Center project name: FBXK

Center clone name: CH240-397L15

Summary Statistics

Sequencing vector: Plasmid;

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 163292 bases at least Q40

Consensus quality: 163699 bases at least Q30

Estimated insert size: 164140 bases at least Q20

Quality coverage: 15x in Q20 bases; sum-of-contigs estimation

\*\*\*\*\*  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/genbank_draft_data.html))  
\* The sequence data in this record represents an 'enhanced' version  
\* of a Phase 2 submission. The indicated order and orientation of  
\* each sequence has been established using one or more of the  
\* following: read-pair data from individual subclones, overlaps  
\* with neighboring clones, alignment with available reference  
\* sequence (e.g., human), and/or confirmation by PCR testing.  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 3 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* been provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 1 81569: contig of 81569 bp in length  
\* 81570 81619: gap of 50 bp  
\* 81620 132377: contig of 50758 bp in length  
\* 132378 132577: gap of 200 bp  
\* 132578 153541: contig of 20964 bp in length.  
Location/Qualifiers  
1. 153541

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Claim 22; Page 10; 74pp; English.

The invention describes synthetic oligonucleotides complementary to a portion of the 5' untranslated region of hepatitis C virus (HCV), useful for diagnosing and treating hepatitis C virus infection, in antisense technology and gene

CC therapy, and of detecting the presence of hepatitis C virus in a sample.  
 CC Hepatitis C virus (HCV) is an enveloped, positive sense, single-stranded  
 CC RNA virus which infects hepatocytes. HCV is the major cause of non-A, non  
 CC -B, acute and chronic hepatitis, and has been associated with  
 CC hepatocellular carcinoma. The invention describes methods and kits for  
 CC inhibiting replication of HCV, inhibiting the expression of HCV nucleic  
 CC acid and protein, and for treating HCV infections. This sequence  
 CC represents a synthetic DNA-RNA hybrid oligonucleotide used for inhibiting  
 CC HCV replication and expression of HCV

XX comprises employing nicking endonucleases that cleave complementary  
XX strands.  
XX  
XX Disclosure, Page 284; 302pp; English.  
XX  
XX The invention relates to a method for obtaining a single stranded  
XX polynucleotide tag from a biological sample by cleaving one of the  
XX complementary strands of a double stranded polynucleotide with a cleavage  
XX agent capable of recognising a double stranded polynucleotide comprising  
XX complementary strands and cleaving only one of the strands of the  
XX polynucleotide in the process of generating a single stranded  
XX polynucleotide tag. The method is useful for separating, analysing,  
XX quantifying or obtaining single stranded polynucleotides comprising tags  
XX originating partly, and preferably wholly from a source of DNA and/or RNA  
XX in a sample comprising biological cells. The method is particularly for  
XX analysing gene expression (expression profiling or differential gene  
XX expression), or in diagnosing clinical conditions. The present sequence  
XX is an adapter oligonucleotide used to illustrate the method of the  
XX invention

XX Novel caspase 5 apoptosis-related cysteine protease, useful  
XX therapeutically and in screening for drugs targeting protease  
XX polypeptide.  
XX  
XX Example 2; Page 114-115; 115pp; English.  
XX  
XX The invention relates to single nucleotide polymorphisms in the gene  
XX encoding the human caspase 5, apoptosis-related cysteine protease (CASP5)  
XX polypeptide. A method for haplotyping the CASP5 gene in an individual  
XX comprises identifying the nucleotide at one or more polymorphic sites and  
XX determining whether one of the copies of the gene is defined by one of  
XX the CASP5 haplotypes given in the specification or whether both copies  
XX are defined by a haplotype pair. This method is useful in genotyping,  
XX whereby all possible haplotype pairs can be assigned to specific  
XX genotypes. An association between a trait and a haplotype or haplotype  
XX pair of the CASP5 gene can be identified by comparing the frequency of  
XX the haplotype or haplotype pair in a population exhibiting the trait with  
XX the frequency of the haplotype or haplotype pair in a reference  
XX population, where a higher haplotype frequency in the trait population  
XX indicates the trait is associated with the haplotype or haplotype pair.  
XX CASP5 and its corresponding DNA are used for studying the expression and  
XX function of CASP5, for use in screening for candidate drugs to treat  
XX diseases related to CASP5 activity, such as cancer (e.g. hereditary  
XX nonpolyposis colorectal cancer, gastrointestinal tumours and endometrial  
XX tumours). This sequence represents genomic DNA modified to facilitate  
XX electronic searching of the CASP5 haplotypes

PT New isolated nucleic acid molecule, useful for drug screening and toxicity assays or for assessing the impact, including toxicity, of a compound, pharmaceutical agent or environmental pollutant on a cell or living organism.

PS Claim 1; SEQ ID NO 6655; 41pp; English.

This invention is related to a novel isolated canine nucleic acid sequences and the construction of canine microarrays containing a significant portion of the canine genome. The isolated canine nucleic acid sequences of the invention may be useful for drug screening and toxicity assays. The invention is therefore useful for assessing the impact, including toxicity, of a compound, pharmaceutical agent or environmental pollutant on a cell or living organism. The methods are useful for detecting genes that are up- or down-regulated in canines in a disease state. The sequences are useful as diagnostic agents or markers to detect a cellular response in a sample individually or as part of a gene expression profile. It is also useful as a target for agents that modulate gene expression or activity. The database is useful for producing electronic Northern blots that allow the user to determine the cell type or tissue in which a given gene is expressed and to allow determination of the abundance or expression level of a given gene in a particular tissue or cell. The methods are useful for determining the similarity of a toxic response to one or more individual compounds. The methods are useful for predicting at least one toxic response or the likelihood that a compound or test agent will induce various specific pathologies such as those of the liver (liver necrosis, fatty liver disease, protein adduct formation or hepatitis), those of the kidney, heart, brain or testes, or other pathologies associated with at least one of the toxins. The methods are also useful for predicting or elucidating the potential cellular pathways influenced, induced or modulated by the compound or test agent due to the similarity of the expression profile compared to the profile induced by a known toxin. The present sequence is that of a canine DNA sequence which was claimed for use during the production of a canine microarray of the invention.

PT New isolated polynucleotide and encoded polypeptide, useful in diagnostics, forensics, gene mapping, identification of mutations PT responsible for genetic disorders or other traits and to assess biodiversity.

PS Claim 1; SEQ ID NO 11805; 103pp; English.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at [http://wipo.int/pub/publ/pct\\_sequences](http://wipo.int/pub/publ/pct_sequences)

PT and comparing the gene expression, also useful in treating soft tissue  
PT sarcoma.

XX Example 2; SEQ ID NO 5790; 210pp; English.

CC The invention relates to a novel method for detecting soft tissue sarcoma  
CC which comprises obtaining a first soft tissue sample from an individual  
CC and a normal soft tissue sample from the same or different individual,  
CC determining the expression of a gene in both samples and comparing the  
CC expression of the gene in both soft tissue samples, where a higher level  
CC of protein expression in the first soft tissue sample indicates the  
CC presence of soft tissue sarcoma. The method of the invention has  
CC cytotatic applications and may be useful for detecting soft tissue  
CC sarcoma, possibly via gene therapy or vaccine production. The nucleic  
CC acid sequences may be useful in diagnostic and screening applications.  
CC The current sequence is that of a human soft tissue sarcoma-upregulated  
CC DNA of the invention. The current sequence is not shown within the  
CC specification per se but was submitted in CD format by the inventor.

 PT New recombinant nucleic acid encoding carcinoma associated protein.  
 PT useful for preparing compositions for treating carcinomas.  
 XX  
 PS Claim 1; SEQ ID NO 1445; 245bp; English.  
 XX

CC The invention relates to recombinant carcinoma associated (CA) nucleic  
 CC acid sequences from mouse and human (ADA01482-ADA03094), and to  
 CC recombinant carcinoma associated proteins (CAP) encoded by them. The  
 CC invention also encompasses expression vectors and host cells comprising a  
 CC CA nucleic acid, a polypeptide (especially an antibody) that specifically  
 CC binds to the protein, and a biochip comprising CA nucleic acid or  
 CC fragments thereof. The sequences of the invention were identified using  
 CC oncogenic retroviruses, which insert into the genome of the host organism  
 CC at random. Many of these do not carry transduced host oncogenes or  
 CC pathogenic trans-acting viral genes, meaning that cancer incidence is a  
 CC direct consequence of the effects of proviral integration into host  
 CC protooncogenes. The CA nucleic acid sequences can be used to diagnose  
 CC carcinoma (especially breast cancer, prostate cancer, lymphoma or  
 CC leukaemia) or a propensity to carcinoma by determination of the sequence  
 CC of a CA gene, or by determination of CA gene expression in particular  
 CC tissues. CA nucleic acids, proteins and antibodies are also useful as  
 CC therapeutic agents and in screening and evaluating drug candidates. The  
 CC present sequence represents a specifically claimed murine CA nucleic acid  
 CC sequence of the invention. Note: The complete sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences.

PT New carcinoma associated gene or protein, useful for preparing a

PT composition for diagnosing or treating carcinoma e.g., leukemia or

PT lymphoma.

XX Claim 1; SEQ ID NO 193; 29pp; English.

CC The invention relates to new recombinant nucleic acids. The invention

CC also relates to a host cell comprising a recombinant nucleic acid or

CC expression vector, an expression vector comprising a recombinant nucleic

CC acid, a recombinant protein, a method of screening for drug candidates, a

CC method of screening for a bioactive agent capable of binding to a

CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a

CC method of screening for a bioactive agent capable of modulating the

CC activity of a CAP, a method of evaluating the effect of a candidate

CC carcinoma drug, a method of diagnosing carcinomas, a method for inhibiting

CC the activity of a CAP, a method of treating carcinomas, a method of

CC neutralising the effect of a CAP and a method of diagnosing carcinoma or

CC propensity to carcinoma. A method of evaluating the effect of a candidate

CC carcinoma drug comprises administering the drug to a patient, removing a

CC cell sample from the patient and determining alterations in the

CC expression or activation of a gene comprising the nucleotide sequence. A

CC method of diagnosing carcinoma comprises determining the expression of

CC one or more genes comprising the nucleic acid sequence in a first tissue

CC type of a first individual and comparing the expression of the gene from

CC a second normal tissue type from the first individual or a second

CC unaffected individual, where a difference in the expression indicates

CC that the first individual has carcinoma. A method of inhibiting the

CC activity of a CAP comprises binding an inhibitor to the CAP. Treating

CC carcinomas comprises administering to a patient an inhibitor of CAP.

CC Neutralising the effect of a CAP comprises contacting an agent specific

CC for the CAP. The polypeptide specifically binds to the protein encoded by

CC the nucleic acid. It comprises an antibody that specifically binds to the

CC protein encoded by the nucleic acid. The nucleic acids are useful for

CC preparing a composition for diagnosing or treating carcinoma e.g.,

CC leukemia or lymphoma. This sequence represents a murine carcinoma

CC associated (CA) nucleic acid of the invention. Note: The sequence data

CC for this patent did not form part of the printed specification but was

CC obtained in electronic format directly from USPTO at

CC segdata.uspto.gov/sequence.html.

```

CC and sensitive, reproducible and quantitative detection of one or more  
CC nucleic acids (single or double stranded). The design of primers and  
CC probes is sufficiently flexible to allow many nucleic acids to be  
CC detected in a standardized reaction format using partly the same primers  
CC and probes. Only small amplicons are produced (requiring short  
CC amplification cycles), there is no competition/displacement between the  
CC short counter-strand of the amplicon and the detection probe, and  
CC specificity is high because the relative proportion of the internal  
CC detection region is increased with respect to the total amplicon length,  
CC allowing better differentiation between (viral) subtypes. Also short  
CC amplicons are less likely to undergo non-specific hybridization, so  
CC background is low, and short RNA sequences are more stable, with reduced  
CC tendency to form secondary structures. AAX23968-69 and AAX24035-37 are  
CC PCR primers and probes used in the method of the invention

XX  
PT Synthetic oligonucleotides complementary to a portion of the 5'  
PT untranslated region of hepatitis C virus (HCV), useful for diagnosing and  
PT treating HCV infections and hepatocellular carcinoma.

XX  
PS Claim 1; Page 61; 74pp; English.

XX  
CC The invention describes synthetic oligonucleotides complementary to a

CC portion of the 5' untranslated region of hepatitis C virus. The  
CC oligonucleotides may be used in methods for controlling, preventing, and  
CC treating hepatitis C virus infection, in antisense technology and gene  
CC therapy, and of detecting the presence of hepatitis C virus in a sample.  
CC Hepatitis C virus (HCV) is an enveloped, positive sense, single-stranded  
CC RNA virus which infects hepatocytes. HCV is the major cause of non-A, non  
CC -B, acute and chronic hepatitis, and has been associated with  
CC hepatocellular carcinoma. The invention describes methods and kits for  
CC inhibiting replication of HCV, inhibiting the expression of HCV nucleic  
CC acid and protein, and for treating HCV infections. This sequence  
CC represents a synthetic oligonucleotide used for inhibiting HCV  
CC replication and expression of HCV

 PT New ribozymes targeting RNA derived from hepatitis C virus inhibit viral  
 PT replication and are useful to treat hepatitis C virus infections and  
 PT cirrhosis, liver failure or hepatocellular carcinoma.  
 XX  
 PS Disclosure; SEQ ID NO 1587; 80pp; English.  
 XX  
 CC The present invention relates to enzymatic nucleic acids which  
 CC specifically cleave RNA derived from Hepatitis C virus (HCV). The  
 CC enzymatic nucleic acid or ribozyme is in a hammerhead (HH) or hairpin  
 CC (HP) motif where the binding arms comprise sequences complementary to one  
 CC of the substrate sequences defined in the specification. The HCV  
 CC ribozymes are useful for modulating the expression and/or replication of  
 CC HCV. They can be used to treat cirrhosis, liver failure and/or  
 CC hepatocellular carcinoma. The HCV ribozymes are also useful for treating  
 CC a condition associated with HCV infection in conjunction with one or more  
 CC other drug therapies, particularly type I interferon, especially  
 CC interferon alpha, beta or gamma or consensus interferon. The present  
 CC sequence represents a RNA sequence of unknown function. Note: The present  
 CC sequence is given in the sequence data but is not mentioned elsewhere in  
 CC the specification. The complete sequence data for this patent was  
 CC obtained in electronic format directly from the USPTO web site at  
 CC seqdata.uspto.gov/psipdIDentry.html

PT Ribozyme capable of inhibiting replication, infectivity or gene  
 expression of hepatitis C virus, useful for treating or preventing  
 PT hepatitis C virus infection.  
 XX

PS Claim 1; Col 13; 57pp; English.

XX The present invention describes ribozymes (I) capable of inhibiting  
 CC replication, infectivity or gene expression of a hepatitis C virus (HCV),  
 CC directed to target sequences AAA13438 to AAA13444, AAA13454 and AAA13465.  
 CC (I) have virucide, hepatotropic and antiinflammatory activities. (I), or  
 CC vectors comprising nucleotide sequences encoding (I), are useful for  
 CC interfering with the replication or gene expression of HCV in a human  
 CC cells. (I) are useful for diagnosis, prevention and treatment of HCV  
 CC infection or disease in a mammals especially humans. Nucleotide sequences  
 CC encoding (I) are useful for preventing hepatitis C viral infection in a  
 CC cell. AAA13401 to AAA13405 represent examples of the briefest  
 CC requirements for hairpin ribozyme; AAA13406 and AAA13407 represent PCR  
 CC primers used in the amplification of the HCV capsid sequence; AAA13408 to  
 CC AAA13467 represent HCV hairpin ribozyme recognition sites; and AAA13468  
 CC to AAA13473 represent oligonucleotides used in the construction of HCV  
 CC hairpin ribozymes, all these sequences are used in the exemplification of  
 CC the present invention

PT New ribozyme having the ability to inhibit replication, infectivity or  
 PT gene expression of a Hepatitis C Virus (HCV), useful for treating or  
 PT preventing HCV infection.  
 XX

PS Example 1; Col 12; 48pp; English.

XX The invention relates to a new ribozyme with the ability to inhibit  
 CC replication, infectivity or gene expression of a Hepatitis C Virus (HCV)  
 CC by cleaving the positive strand genomic RNA of HCV at a sequence having  
 CC 16 bp. Also included are a nucleic acid encoding the ribozyme, a host  
 CC cell containing the ribozyme or vector, a vector comprising a promoter  
 CC operably linked to the nucleic acid, producing a ribozyme, interfering  
 CC with HCV replication or gene expression in a cell infected in a cell  
 CC culture with HCV or a composition comprising the ribozyme and a carrier  
 CC or diluent. The ribozyme is useful for treating or preventing HCV  
 CC infection. The present sequence is an HCV -ve strand recognition sequence  
 CC for a ribozyme of the invention

PT Novel compound useful for treating cirrhosis, liver failure,  
 PT hepatocellular carcinoma, or condition associated with hepatitis C virus  
 PT infection.

PS Claim 1; Page 315; 387pp; English.

CC The present invention relates to nucleic acid molecules which modulate  
 CC the synthesis, expression and/or stability of Hepatitis C virus (HCV) or  
 CC Hepatitis B virus (HBV) RNA. The nucleic acid molecules include antisense  
 CC and enzymatic nucleic acids such as hammerhead ribozymes, DNAses,  
 CC inozymes, zinzymes, amberyzymes, and G-cleaver ribozymes. Also disclosed  
 CC are nucleic acid decoy molecules and aptamers that bind to HBV reverse  
 CC transcriptase and/or HBV reverse transcriptase primer sequences, as well  
 CC as oligonucleotides that specifically bind the Enhancer I region of HBV  
 CC DNA. The nucleic acids may be used to modulate the expression of HBV  
 CC genes and HBV viral replication. Also disclosed is a method for screening  
 CC compounds and/or potential therapies directed against HBV, and compounds  
 CC that modulate the expression and/or replication of HCV. The compounds and

CC methods of the invention are useful for the treatment of degenerative and  
 CC disease states related to HBV and HCV infection, replication and gene  
 CC expression such as cirrhosis, liver failure, and hepatocellular  
 CC carcinoma. The present sequence represents a substrate for one of the HCV  
 CC DNAzyme or minus strand DNAzyme sequences disclosed in the present  
 CC invention

PT from hepatitis C virus (HCV), useful for the treatment of HCV infections,

PT especially in combination with type I interferon therapy.

XX Claim 1; SEQ ID NO 26; 198bp; English.

PS The invention relates to an enzymatic nucleic acid molecule which

CC specifically cleaves RNA derived from hepatitis C virus (HCV), in which

CC the binding arms of the enzymatic nucleic acid molecule comprises

CC sequences complementary to any of the defined substrate sequences given

CC in the specification. The nucleic acid molecule may be administered for

CC the treatment of HCV infections, especially in combination with type I

CC interferons. The present sequence represents a HCV DNAzyme substrate

CC sequence.

XX  
CC The sequences given in AAT80211-382 represent synthetic oligonucleotides  
CC which are complementary to a portion of the 5' untranslated region (UTR)  
CC of hepatitis C virus (HCV). These sequences may be used in a  
CC pharmaceutical composition for the control or prevention of HCV  
CC infection. They may be used to inhibit replication or expression of HCV  
CC or for detecting the presence of HCV in a sample. They may be used to  
CC inhibit HCV replication in a cell and are therefore useful in the  
CC treatment of HCV infections such as chronic and acute hepatitis and  
CC hepatocarcinoma. This oligo was used in a luciferase assay to determine  
CC whether it binds successfully to its target

XX
XX Oligo:nucleotide(s) complementary to HCV 5' untranslated region - used in
PT the treatment and detection of HCV infection, esp. hepatitis and hepato-
PT carcinoma.
XX
XX Claim 19; Page 31; 100pp; English.
XX
CC The sequences given in AAT80211-382 represent synthetic oligonucleotides
CC which are complementary to a portion of the 5' untranslated region (UTR)
CC of hepatitis C virus (HCV). These sequences may be used in a
CC pharmaceutical composition for the control or prevention of HCV
CC infection. They may be used to inhibit replication or expression of HCV
CC or for detecting the presence of HCV in a sample. They may be used to
CC inhibit HCV replication in a cell and are therefore useful in the
CC treatment of HCV infections such as chronic and acute hepatitis and
CC hepatocarcinoma. This oligo was used in a luciferase assay to determine
CC whether it binds successfully to its target

```

XX PS Claim 22; Page 10; 74pp; English.

XX CC The invention describes synthetic oligonucleotides complementary to a

XX CC portion of the 5' untranslated region of hepatitis C virus. The

XX CC oligonucleotides may be used in methods for controlling, preventing, and

XX CC treating hepatitis C virus infection, in antisense technology and gene

XX CC therapy, and of detecting the presence of hepatitis C virus in a sample.

XX CC Hepatitis C virus (HCV) is an enveloped, positive sense, single-stranded

XX CC RNA virus which infects hepatocytes. HCV is the major cause of non-A, non

XX CC -B, acute and chronic hepatitis, and has been associated with

XX CC hepatocellular carcinoma. The invention describes methods and kits for

XX CC inhibiting replication of HCV, inhibiting the expression of HCV nucleic

XX CC acid and protein, and for treating HCV infections. This sequence

XX CC represents a synthetic DNA-RNA hybrid oligonucleotide used for inhibiting

XX CC HCV replication and expression of HCV

PT Synthetic oligonucleotides complementary to a portion of the 5' untranslated region of hepatitis C virus (HCV), useful for diagnosing and treating HCV infections and hepatocellular carcinoma.

PS Claim 23; Page 7; 74pp; English.

XX The invention describes synthetic oligonucleotides complementary to a portion of the 5' untranslated region of hepatitis C virus. The oligonucleotides may be used in methods for controlling, preventing, and treating hepatitis C virus infection, in antisense technology and gene therapy, and of detecting the presence of hepatitis C virus in a sample. Hepatitis C virus (HCV) is an enveloped, positive sense, single-stranded RNA virus which infects hepatocytes. HCV is the major cause of non-A, non-B, acute and chronic hepatitis, and has been associated with hepatocellular carcinoma. The invention describes methods and kits for inhibiting replication of HCV, inhibiting the expression of HCV nucleic acid and protein, and for treating HCV infections. This sequence  
CC represents a synthetic DNA-RNA hybrid oligonucleotide used for inhibiting  
CC HCV replication and expression of HCV

 PT Synthetic oligonucleotides complementary to a portion of the 5'  
 PT untranslated region of hepatitis C virus (HCV), useful for diagnosing and  
 PT treating HCV infections and hepatocellular carcinoma.  
 XX  
 PS Claim 22; Page 11; 74pp; English.  
 XX  
 CC The invention describes synthetic oligonucleotides complementary to a  
 CC portion of the 5' untranslated region of hepatitis C virus. The  
 CC oligonucleotides may be used in methods for controlling, preventing, and  
 CC treating hepatitis C virus infection, in antisense technology and gene  
 CC therapy, and of detecting the presence of hepatitis C virus in a sample.  
 CC Hepatitis C virus (HCV) is an enveloped, positive sense, single-stranded  
 CC RNA virus which infects hepatocytes. HCV is the major cause of non-A, non  
 CC -B, acute and chronic hepatitis. HCV is the major cause of non-A, non  
 CC hepatocellular carcinoma. The invention describes methods and kits for  
 CC inhibiting replication of HCV, inhibiting the expression of HCV nucleic  
 CC acid and protein, and for treating HCV infections. This sequence  
 CC represents a synthetic DNA-RNA hybrid oligonucleotide used for inhibiting  
 CC HCV replication and expression of HCV

XX  
CC AA299212-26 represent PCR primers used in a primer-specific and mispair  
CC extension assay (PSMEA) for genotype determination of Hepatitis C virus  
CC (HCV). The method comprises extending an unknown nucleic acid sequence  
CC (from a patient) using a primer specific for particular genotype and  
CC incomplete set of dNTPs under suitable conditions followed by  
CC characterizing and comparing the extension products with known nucleic  
CC acid sequences of various genotypes. The present primers are used for  
CC detecting nucleotide variations in the 5' untranslated region of the HCV  
CC genome. PSMEA is capable of accurately detecting heterozygotes and  
CC nucleotide mutations in a nucleic acid sequence. The PSMEA is useful for  
CC identifying gene variations such as in different genotypes or subtypes  
CC a given genotype, especially Hepatitis C virus genotypes and subtypes

PT New double-stranded short interfering nucleic acid comprises sugar-  
PT modified pyrimidine bases useful for treating infection with hepatitis C  
PT virus.  
XX  
PS Example 3; SEQ ID NO 466; 183bp; English.  
XX  
PS This invention relates to novel double-stranded short interfering nucleic  
CC acids (siNA) that inhibits replication of hepatitis C virus (HCV), where  
CC one strand is an antisense strand (ASs) that is complementary to (part  
CC of) an HCV RNA (portion) and a sense strand (SS) that is complementary to  
CC ASs, and where most of the pyrimidine nucleotides comprise a sugar  
CC modification. The invention may allow development of compounds with  
CC viraemic, antiinflammatory, hepatotropic or cytostatic activities by  
CC modulation (inhibition) of expression or activity of HCV RNA, by RNA  
CC interference. The siNA's of the invention may be used to inhibit  
CC replication of HCV, in cells, tissue explants or organisms, for treating  
CC HCV infection and its consequences (liver failure; hepatocellular cancer  
CC and cirrhosis), and also for drug screening, diagnosis, target  
CC identification and validation, genetic engineering, pharmacogenomics,

CC studying gene function and gene mapping (for example of single-nucleotide  
CC polymorphisms). The chemical modification improves stability, activity,  
CC cellular uptake and/or binding affinity. The siNA can be directed to  
CC conserved regions of HCV genes, so are active against many different  
CC strains.

```

XX This invention relates to novel double-stranded short interfering nucleic  
CC acids (siNA) that inhibits replication of hepatitis C virus (HCV), where  
CC one strand is an antisense strand (ASS) that is complementary to (part  
CC of) an HCV RNA (portion) and a sense strand (SS) that is complementary to  
CC ASS, and where most of the pyrimidine nucleotides comprise a sugar  
CC modification. The invention may allow development of compounds with  
CC antiviral, antiinflammatory, hepatotropic or cytostatic activities by  
CC modulation (inhibition) of expression or activity of HCV RNA, by RNA  
CC interference. The siNA's of the invention may be used to inhibit  
CC replication of HCV, in cells, tissue explants or organisms, for treating  
CC HCV infection and its consequences (liver failure, hepatocellular cancer  
CC and cirrhosis), and also for drug screening, diagnosis, target  
CC identification and validation, genetic engineering, pharmacogenomics,  
CC studying gene function and gene mapping (for example of single-nucleotide  
CC polymorphisms). The chemical modification improves stability, activity,  
CC cellular uptake and/or binding affinity. The siNA can be directed to  
CC conserved regions of HCV genes, so are active against many different  
CC strains.

PT Capture oligonucleotide composition useful for detection of hepatitis B  
PT virus (HBV), comprising polynucleotide having HBV-complementary sequence  
PT which is immobilized on solid support.  
XX  
PS Example 7; SEQ ID NO 121; 112bp; English.  
XX  
CC The invention relates to a capture oligonucleotide composition comprising  
CC an hepatitis B virus (HBV)-complementary sequence polynucleotide  
CC immobilised to a solid support. The composition is useful for detecting  
CC nucleic acids of HBV and/of HIV-1 and/or HCV in biological sample such as

CC blood, serum, plasma or other body fluid or tissue to be tested. The  
 CC composition can be used either in diagnostic application or for screening  
 CC donated blood and that products or other tissues that may contain  
 CC infectious particles. The composition facilitates detection of very low  
 CC levels of HBV nucleic acids. The composition allows selective detection  
 CC of nucleic acids of HBV and/or HIV and/or HCV. The present sequence is  
 CC used in the exemplification of the invention.

 PT Interference RNA agent useful for treating dyslipidemia; coronary artery  
 PT disease, diabetes, cancer or neurological disease, comprises sense  
 PT sequence and antisense sequence which has specific modifications.  
 XX

PS Example 5; SEQ ID NO 5721; 378bp; English.

XX  
 CC The invention describes a RNA interference (iRNA) agent (I) comprising a  
 CC sense sequence and an antisense sequence, where the sense sequences have  
 CC one or more asymmetrical 2'-O alkyl modifications, the antisense  
 CC sequences have one or more asymmetrical phosphorothioate modifications  
 CC and the antisense sequence targets a human gene sequence. Also described  
 CC are: a pharmaceutical preparation comprising (I); reducing (M1) apob-100  
 CC levels or glucose-6-phosphatase levels in a subject; producing (I);  
 CC stabilising (I), involves selecting a sequence with activity and  
 CC introducing one or more asymmetrical modification in the sequence, where  
 CC the modification decreases nucleic acid sensitivity while not decreasing its  
 CC activity; a kit comprising (I) and instruction for its use; and a device  
 CC that can be dispense or administer a composition comprising (I). (I) is  
 CC useful for reducing apob-100 levels or glucose-6-phosphatase levels.  
 CC The subject is suffering from a disorder characterised by elevated or  
 CC otherwise unwanted expression of apob-100, elevated or otherwise unwanted  
 CC levels of cholesterol and/or dysregulation of lipid metabolism. The  
 CC disorder is chosen from the HDL/LDL cholesterol imbalance,  
 CC dyslipidemia, hypercholesterolaemia, statin-resistant  
 CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart  
 CC disease (CHD) and atherosclerosis. (I) is administered to a subject to  
 CC inhibit hepatic glucose production or for treating glucose-metabolism-  
 CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for  
 CC treating the diseases as mentioned above, cancer (e.g. breast, colon or  
 CC lung cancer), neurological disease (e.g., Huntington disease or  
 CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence  
 CC represents a hepatitis C virus (HCV) antisense oligonucleotide that can  
 CC be used to control HCV gene expression.

 CC RNA was extracted from the serum of an HCV-positive blood donor, subjected  
 CC to reverse transcription and the cDNA formed amplified by PCR.  
 CC Amplification products were cloned, screened with a probe derived from the  
 CC HCV prototype and inserts sequenced. The results showed marked  
 CC conservation in the non-coding region, significant variability in the  
 CC structural region (encoding envelope proteins) and reduced variability in  
 CC the non-structural region. The primer and probe sequences and positions  
 CC correspond to the HCV prototype (HCV pt) (EP-A-O 318 216 and WO-A-  
 CC 90/14436). (Updated on 25-MAR-2003 to correct PN field.)

PT Antisense oligonucleotide(s) complementary to hepatitis C viral genome
PT - useful for inhibiting HCV replication, to treat related diseases.
XX
XX Claim 28; Page 24; 91pp; English.
XX
CC Antisense oligonucleotides were synthesised which are complementary to
CC target sequences located at 10-nucleotide intervals from nucleotide 1 to
CC 339 in the HCV RNA 5'-untranslated region. Of these sequences (CAS-1 to
CC CAS-320), oligonucleotide CAS-110 (AA058403), which is complementary to a
CC portion of loop C, was found to cause greater than 80% inhibition of core
CC protein translation. Antisense oligonucleotides which are complementary
CC to the 26 base region from nucleotides 104-129 of HCV RNA showed strong
CC inhibitory activity compared to oligonucleotides complementary to other
CC regions of the 5'-UTR. The oligonucleotides CAS-104, -106 and -108 showed
CC 70% or more inhibition of HCV translation. See AA058388-Q58422, AA044885-
CC Q44892 and AA058383. (Updated on 25-MAR-2003 to correct PN field.)

DR Replication of hepatitis C virus in non-lymphoblastoid mammalian cells -

XX useful for studies of HCV replication, prodn. of vaccines or viral

PT antigens, etc.

PS Disclosure; Page 8; 25pp; English.

XX Hepatitis C virus can be replicated in non-lymphoblastoid mammalian cells

CC by first incubating an HCV sample with the cells until an infecting

CC amount of HCV has been absorbed. Infected cells are then washed and

CC incubated under growth conditions. In an example, the presence of HCV in

CC culture medium of monkey kidney cells inoculated with HCV-infected serum

CC was verified by PCR amplification using two external primers (OU1 and

CC OU2, see AAT39731 and AAT39732) and two internal primers (IN1 and IN2,

CC see AAT39733 and AAT39734). The amplified products were identified by

CC hybridisation to labelled probe SI (see AAT39735). Small amounts of virus

CC were shown to be released into the culture medium from secondary

CC cultures. Control (non-inoculated) cells were negative for presence of

CC viral genome

XX PT Identifying a viral replication inhibitor comprises contacting nucleic  
 acids from a virus infected host with an amplification mixture of two  
 PT primers and/or probes that provide detectable signals during a polymerase  
 PT chain reaction.

XX PS Example 16; Page 36; 95pp; English.

XX CC This invention relates to a novel method for identifying an inhibitor of  
 CC viral replication by contacting nucleic acids from a virus infected host  
 CC with an amplification mixture having 2 primers and/or probes that provide  
 CC detectable signals during a polymerase chain reaction. The method of the  
 CC invention is useful for identifying a compound that inhibits viral  
 CC replication. Another new method is useful for assessing the toxicity of  
 CC an anti-viral compound. The method of the invention is economic, non-  
 CC radioactive, rapid, accurate, reproducible and amenable to large  
 CC throughput. The second method of the invention is a sensitive and  
 CC accurate method for determining mitochondrial toxicity of a compound. The  
 CC present sequence represents a hepatitis C virus (HCV) real time PCR probe  
 CC used in the method of the invention

XX PT Producing DNA encoding restriction endonuclease with altered specificity,  
 PT comprises mutagenizing DNA encoding the enzyme and isolating DNA encoding  
 PT mutated enzyme with specificity for an altered sequence.

XX PS Example; Page 5; 44pp; English.

XX CC The invention relates to a method of producing a polynucleotide encoding  
 CC a restriction endonuclease with altered specificity. The method involves  
 CC mutagenizing a polynucleotide encoding restriction endonuclease with  
 CC specificity for a recognition sequence to produce mutated polynucleotides  
 CC and isolating from them a polynucleotide encoding mutated restriction  
 CC endonuclease with specificity for an altered recognition sequence by  
 CC selecting a polynucleotide expressing a restriction endonuclease with  
 CC methylase specificity for the altered recognition sequence. The method is  
 CC useful for producing a polynucleotide encoding a restriction endonuclease  
 CC comprising Eco571, BcgI, HaeIII or AclI, with an altered specificity. The  
 CC method allows selection of mutant variants recognising new sequences that  
 CC differ not only in single nucleotide from wild type enzyme but also for  
 CC mutants that recognise degenerate sequences or sequences differing in  
 CC several nucleotides, especially if mutants of altered specificity are  
 CC taken into the next round of mutagenesis and digestion-selection. The  
 CC present sequence is recognition sequence of GsuI restriction enzyme

 PT Use of beta-D and beta-L nucleosides in the treatment of a virus  
 PT belonging to the Flaviviridae, Orthomyxoviridae or Paramyxoviridae  
 PT family.  
 PS  
 PS Example 52; Page 181; 230pp; English.  
 XX  
 CC The specification describes a method for the treatment or prophylaxis of  
 CC a host exhibiting a Flaviviridae, Orthomyxoviridae or Paramyxoviridae  
 CC viral infection or abnormal cellular proliferation. The method involves  
 CC administering a beta-D or beta-L nucleoside, of formulas given in the  
 CC specification, to the host. The method is useful for the treatment of a  
 CC Flaviviridae, Orthomyxoviridae and/or Paramyxoviridae viral infection,  
 CC and abnormal cellular proliferation. The Flaviviridae viral infection  
 CC includes hepatitis C virus (HCV) and bovine viral diarrhoea virus (BVDV).  
 CC The Orthomyxoviridae viral infection includes respiratory syncytial virus  
 CC (RSV) e.g. bovine RSV, ovine RSV, caprine RSV, pneumonia virus of mice  
 CC and turkey rhinotracheitis virus. The abnormal cellular proliferation  
 CC includes hyperproliferation e.g. psoriasis, chronic eczema, atopic  
 CC dermatitis, lichen planus, wart, pemphigus vulgaris, actinic keratosis,  
 CC basal cell carcinoma and squamous cell carcinoma, blood vessel  
 CC proliferation disorders, fibrotic disorders, autoimmune disorders, graft-  
 CC versus-host rejection, tumours and cancers. The blood vessel  
 CC proliferation disorders e.g. restenosis, retinopathy and atherosclerosis  
 CC include angiogenic and vasculogenic disorders, the fibrotic disorders  
 CC include hepatic cirrhosis and mesangial proliferation cell disorders  
 CC include human renal diseases e.g. glomerulonephritis, diabetic  
 CC nephropathy, malignant nephrosclerosis, thrombotic microangiopathy  
 CC syndromes, transplant rejection and glomerulangiopathy syndromes. The  
 CC method is also useful for treating rheumatoid arthritis, Bachel's

CC syndrome, leukemia, acquired immune deficiency syndrome, vasculitis,  
 CC lipid histiocytosis, septic shock and inflammation. The present sequence  
 CC represents a probe complementary to the HCV 5' untranslated region, which  
 CC is used in the course of the invention

 PT Synthetic oligonucleotides complementary to a portion of the 5'  
 PT untranslated region of hepatitis C virus (HCV), useful for diagnosing and  
 PT treating HCV infections and hepatocellular carcinoma.  
 PS  
 PS Disclosure; Page 8; 74pp; English.  
 XX  
 CC The invention describes synthetic oligonucleotides complementary to a  
 CC portion of the 5' untranslated region of hepatitis C virus. The  
 CC oligonucleotides may be used in methods for controlling, preventing, and  
 CC treating hepatitis C virus infection, in antisense technology and gene  
 CC therapy, and of detecting the presence of hepatitis C virus in a sample.  
 CC Hepatitis C virus (HCV) is an enveloped, positive sense, single-stranded  
 CC RNA virus which infects hepatocytes. HCV is the major cause of non-A, non-  
 CC B, acute and chronic hepatitis, and has been associated with  
 CC hepatocellular carcinoma. The invention describes methods and kits for  
 CC inhibiting replication of HCV, inhibiting the expression of HCV nucleic  
 CC acid and protein, and for treating HCV infections. This sequence

CC represents a synthetic oligonucleotide used for inhibiting HCV  
 CC replication and expression of HCV

PT Structure and usage of antisense oligonucleotide for treating diseases  
 PT correlative to hepatitis C virus.

PS Claim 1; Page 1; 20pp; Chinese.

CC The present invention describes antisense oligonucleotides which are  
 CC designed and synthesised on the basis of the gene structure of hepatitis  
 CC C virus (HCV) and can be used to suppress the expression of HCV gene. The  
 CC non-coding region 5' of HCV gene is used to regulate the instantaneous  
 CC expression system of leuciferinase gene in HepG2 cells and the transgenic  
 CC cell model HepG2.9706 of luciferase gene. The 15 antisense  
 CC oligonucleotides (AA07298 to AA07302) which are complementary to the  
 CC non-coding region 5' and translational initiation region of HCV are  
 CC actively screened and evaluated to discover for the first time the  
 CC oligonucleotides HCV279, HCV349, HCV363, HCV65 and HCV 313 and their  
 CC chemical modified objects for suppressing the expression of HCV gene.  
 CC Thus, the present invention relates to the new medicine for treating the  
 CC diseases associated with HCV

PT Identifying a compound that inhibits replication of a hepatitis C virus
PT (HCV) RNA comprises contacting a cell comprising a replication competent
PT HCV RNA containing a heterologous polynucleotide encoding a
PT transactivator, with a compound.
XX
XX Example 2; SEQ ID NO 7; 95bp; English.
XX
PS The invention describes a method of identifying a compound that inhibits
CC replication of a hepatitis C virus (HCV) RNA. The method comprises
CC contacting a cell comprising a replication competent HCV RNA containing a
CC heterologous polynucleotide having a first coding sequence encoding a
CC transactivator, with a compound. The method is useful for identifying a
CC compound that inhibits replication of HCV RNA. The kit is useful for
CC detecting replication competent HCV RNA. This sequence represents a probe
CC used to detect DNA encoding HCV in order to detect the production of the
CC virus by chimpanzee.

XX
PT Novel replication competent hepatitis C virus for producing infectious
PT viral particles and as antigen for detecting hepatitis C virus
PT antibodies, comprises hepatitis C virus genome and heterologous
PT polynucleotide.
XX
XX Example 2; Page 12; 37bp; English.
XX
PS The invention discloses a replication competent hepatitis C virus (HCV)
CC comprising a HCV virus genome and a heterologous polynucleotide, where
CC the HCV genome comprises a 3' non-translated RNA and the heterologous
CC polynucleotide is present in the 3' non-translated RNA. HCV is a cause of
CC chronic viral hepatitis, hepatic fibrosis, cirrhosis and/or the
CC development of hepatocellular carcinoma. A cell comprising the HCV is
CC useful for selecting or detecting a replication competent HCV, for
CC identifying a compound that inhibits replication of HCV, for producing
CC infectious viral particles which are useful as a source of virus
CC particles for various assays, including evaluating methods for
CC inactivating particles, excluding particles from serum, identifying a
CC neutralizing compound and as an antigen for use in detecting anti-HCV
CC antibodies in an animal. The cell comprising the HCV is also useful for
CC identifying a variant HCV. An HCV particle is useful as an antigen, as a
CC positive-control in assays that test for the presence of anti-HCV
CC antibodies, to produce antibodies to detect the presence of viral
CC particles in biological samples (e.g. blood products and cell-free blood
CC products) and as a source of viral antigen to measure the presence and
CC amount of antibody present in an animal. The sequence presented is the
CC Light Cycler PCR red probe which was used to detect HCV

 PT Producing DNA encoding restriction endonuclease with altered specificity;  
 PT comprises mutagenizing DNA encoding the enzyme and isolating DNA encoding  
 PT mutated enzyme with specificity for an altered sequence.  
 XX  
 PS Example; Page 5; 44pp; English.  
 XX  
 CC The invention relates to a method of producing a polynucleotide encoding  
 CC a restriction endonuclease with altered specificity. The method involves  
 CC mutagenizing a polynucleotide encoding restriction endonuclease with  
 CC specificity for a recognition sequence to produce mutated polynucleotides  
 CC and isolating from them a polynucleotide encoding mutated restriction  
 CC endonuclease with specificity for an altered recognition sequence by  
 CC selecting a polynucleotide expressing a restriction endonuclease with  
 CC methylease specificity for the altered recognition sequence. The method is  
 CC useful for producing a polynucleotide encoding a restriction endonuclease  
 CC comprising Eco571, BcgI, HaeIII or A101, with an altered specificity. The  
 CC method allows selection of mutant variants recognising new sequences that  
 CC differ not only in single nucleotide from wild type enzyme but also for  
 CC mutants that recognise degenerate sequences or sequences differing in  
 CC several nucleotides, especially if mutants of altered specificity are  
 CC taken into the next round of mutagenesis and digestion-selection. The  
 CC present sequence is recognition sequence of Gsui restriction enzyme

 PT Selective cleavage of single-stranded nucleic acid, useful for preparing  
 PT display libraries of proteins and peptides, by hybridization with  
 PT oligonucleotide and enzymatic restriction.  
 XX  
 PS Disclosure; SEQ ID NO 223; 190pp; English.  
 XX  
 CC The invention relates to a method of cleaving single-stranded (ss)  
 CC nucleic acid (I) at a selected location, using an oligonucleotide (ON)  
 CC that is complementary to (I) in the target region and a restriction  
 CC endonuclease (RE). The ON forms, with its complement in (I), an RE  
 CC recognition site that ensures cleavage only at the selected location.  
 CC Contact between (I) and ON, and treatment with RE, are done at a  
 CC temperature at which (I) (I) is maintained in substantially ss form and  
 CC (II) RE is active. ON is (I) single stranded, and includes a sequence  
 CC that forms, with its complement in (I), the RE site or (II) has a double-  
 CC stranded (ds) region that includes a recognition site for a type IIS RE  
 CC that cleaves at a remote site formed by complementation of (I) and the ss  
 CC region of ON. The method is used to construct libraries of genetic  
 CC packages (phages) that display diverse families of (poly)peptides and  
 CC proteins (A), especially human Fab or other antibody fragments. The  
 CC libraries are screened to identify (A) for possible therapeutic use. The  
 CC method is not biased to DNAs containing native sequences complementary to  
 CC amplification primers and allows any sequences that may be deleterious to  
 CC expression to be removed before cloning and display. DNAs are cut only at  
 CC a single (constant) site, without the need to build an RE site into the  
 CC or primers used for reverse transcription or amplification, and any natural  
 CC or synthetic site can be used for cleavage. The use of a partially ds ON  
 CC allows cleavage at sites where no restriction sites occur naturally or  
 CC can be created. Both methods allow use of 5' and 3' primers for maximum  
 CC diversity. This sequence represents a sequence used in the invention.

PT Detecting presence of target nucleic acid molecule e.g. human

PT immunodeficiency virus, hepatitis B or C virus in a sample, by using a

PT universal multi-variant detection system.

PS Example; Page 25; 63pp; English.

XX The invention relates to a novel method for a primer extension chain

CC reaction for determining presence of a target nucleic acid molecule in a

CC sample, where the nucleotide at 3' end of the reverse primer hybridises

CC with nucleotide at 5' end of the forward primer extension product or a

CC nucleotide separated from the nucleotide at 5' end of the forward primer

CC extension product by a gap comprising a highly conserved nucleotide

CC sequence. The method is useful for determining presence of a target

CC nucleic acid molecule known to have variant sequences, in a sample. The

CC target nucleic acid is preferably a virus including human

CC immunodeficiency virus (HIV), hepatitis C virus (HCV), hepatitis B virus

CC (HBV) or Parvovirus B19. This polynucleotide sequence represents a PCR

CC primer used in the primer extension chain reaction method of the

CC invention

(GENO-) GENOMIC EXPRESSION APS.

Pederesen ML;

WPI: 2002-636542/68.

Obtaining single stranded polynucleotide tags from a biological sample,  
for analyzing gene expression or diagnosing clinical conditions,  
comprises employing nicking endonucleases that cleave complementary  
strands.

Disclosure; Page 88; 302pp; English.

The invention relates to a method for obtaining a single stranded  
polynucleotide tag from a biological sample by cleaving one of the  
complementary strands of a double stranded polynucleotide with a cleavage  
agent capable of recognising a double stranded polynucleotide comprising  
complementary strands and cleaving only one of the strands of the  
polynucleotide in the process of generating a single stranded  
polynucleotide tag. The method is useful for separating, analyzing,  
quantifying or obtaining single stranded polynucleotides comprising tags  
originating partly, and preferably wholly from a source of DNA and/or RNA  
in a sample comprising biological cells. The method is particularly for  
analyzing gene expression (expression profiling or differential gene  
expression), or in diagnosing clinical conditions. The present sequence  
is Bpm I restriction endonuclease recognition motif. This sequence is  
used to illustrate the method of the invention

Anti-sense oligo:nucleotide(s) complementary to the hepatitis C virus  
genome - are useful as antiviral agents.

Claim 5; Page 160; 262pp; English.

This oligonucleotide is an example of a preferred antisense compound i.e.  
it has a base sequence of 15-30 bases which is included within the 49  
bases from G at position 127 to C at position 175 of AA064913 and which  
contains at least 7 bases from C at position 147 to C at position 153.  
The antisense oligonucleotide is useful for inhibiting translation of HCV  
genes

PT Hepatitis C virus (HCV) anti:sense RNA - inhibits HCV structural gene  
PT expression in vivo for treatment of HCV infection.  
XX  
PS Example 1; Page 4; 12pp; Japanese.  
XX  
CC The present sequence is that of amplification primer AS33 which was used  
CC for amplifying partial 5'-UTR sequences from the HCV genome. Clone 2-1  
CC (Journal of Virology: 66, 1476-1483 (1992)) was used as the template for  
CC PCR. The amplified fragments were transcribed to produce antisense RNA  
CC which is useful for inhibiting expression of HCV structural genes and  
CC thereby inhibiting viral replication in vivo. The antisense therapy can  
CC be used in addition to conventional interferon treatment of HCV  
CC infections

XX  
CC The sequences given in AAT80211-382 represent synthetic oligonucleotides  
CC which are complementary to a portion of the 5' untranslated region (UTR)  
CC of hepatitis C virus (HCV). These sequences may be used in a  
CC pharmaceutical composition for the control or prevention of HCV  
CC infection. They may be used to inhibit replication or expression of HCV  
CC or for detecting the presence of HCV in a sample. They may be used to  
CC inhibit HCV replication in a cell and are therefore useful in the  
CC treatment of HCV infections such as chronic and acute hepatitis and  
CC hepatocarcinoma. This oligo was used in a luciferase assay to determine  
CC whether it binds successfully to its target

COMMENT  
If you are interested in getting corresponding physical clones, these are publicly available from ZmDB, www.zmdb.iastate.edu; TIGR, www.tigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowa State, then clones may be requested from ZmDB: www.zmdb.iastate.edu.

 Clones are derived from the bovine BAC library CHORI-240  
 (http://www.chori.org/bacpac/bovine240.htm).  
 Bases shown have Phred quality value equal to or higher than 20.  
 Bases with quality value below 20 were masked with 'N'.  
 For BAC library availability, please contact Pieter de Jong  
 (pjejong@mail.cho.org).  
 Clones may be purchased from BACPAC Resources  
 (http://www.chori.org/bacpac/ordering\_information.htm).  
 This work was undertaken as part of the International Bovine BAC  
 Mapping Consortium (IBMC) by Embrapa Recursos Geneticos e  
 Biotecnologia with financing from Conselho Nacional de  
 Desenvolvimento Cientifico e Tecnologico (CNPq), Brazil

Site 2: NotI; This normalized library was constructed from  
1 million independent clones. cDNA synthesis was initiated  
using an oligo(dt) primer, using methylated C in the first

strand synthesis reaction. Following this first strand  
reaction, double-stranded cDNA was blunt-ended, ligated to  
NotI adapters, digested with EcoRI, size-selected, and  
cloned into the NotI and EcoRI compatible sites of a  
custom modified MCS of the pBluescript (KS+) vector. The  
library was normalized in 2 rounds using conditions  
adapted from Soares et al., PNAS (1994) 91: 9228-9232 and  
Bonaldo et al., Genome Research 6 (1996): 791, except that  
a significantly longer reannealing hybridization was  
used."

 COMMENT If you are interested in getting corresponding physical clones,  
 these are publicly available from ZmDB and may be found by BLAST  
 searching at MSL, [maizemap.org](http://maizemap.org); ZmDB, [www.zmdb.iastate.edu](http://www.zmdb.iastate.edu); TIGR,  
[www.tigr.org](http://www.tigr.org); or NCBI, [www.ncbi.nlm.nih.gov](http://www.ncbi.nlm.nih.gov). When the source of the  
 maize cDNA sequences is either Virginia Walbot, Stanford or Pat  
 Schnable, Iowa State, then clones may be requested from ZmDB:  
[www.zmdb.iastate.edu](http://www.zmdb.iastate.edu).

 /clone lib="NIA Mouse Newborn Kidney cDNA Library (long)"  
 /note=Torgan: kidney; vector: pSPORT1 (Invitrogen);  
 Site\_1: Sall; Site\_2: NotI; Mouse cDNA project by the  
 Laboratory of Genetics, National Institute on Aging (NIA)  
 Intramural Research Program, NIH  
 (<http://lgsun.grc.nia.nih.gov/cDNA/>). This is a  
 long-transcript enriched cDNA library (Ref. Genome Res.  
 11:1553-1558 (2001). [PMID:11544199]). In  
 brief double-stranded cDNAs were synthesized with an  
 oligo(dT) primer [Invitrogen: 5'-  
 pGACATAGTTCTTAGATCGGAGGCGCCGCTTTTTTTTTT-3'] from 26  
 microgram of total RNA, treated with T4 DNA polymerase,  
 and purified by ethanol-precipitation. The cDNAs were  
 ligated to lone-linker IL-Sal4, purified by  
 phenol/chloroform, and separated from free linkers by  
 Centricon 100. Then, the cDNAs were amplified by  
 long-range high fidelity PCR using Ex Taq polymerase  
 (Takara) with a primer Sal4-S. The products were purified  
 by phenol/chloroform and Centricon 100. The cDNAs were  
 digested with Sall and NotI enzymes, and cloned into  
 Sall/NotI site of pSPORT1 plasmid vector. The DH10 E.  
 coli host was transformed with ligation mixture by the  
 standard chemical method. The average insert size is about  
 3.0 kb. The library was constructed by Yulan Piao (NIA)."

NotI; Mouse cDNA project by the Laboratory of Genetics,  
National Institute on Aging (NIA), Intramural Research  
Program, NIH (http://igsun.grc.nia.nih.gov/cdna). This is  
a short-transcript enriched cDNA library (Ref. Genome Res.  
11: 1553-1558 (2001). [PMID: 11544199]). In brief,  
double-stranded cDNAs were synthesized with an Oligo (dT)  
primer (Invitrogen: 5'-  
pgactagcttcagatccgagccgccctttttttttttt-3') from 26  
ug of total RNA, created with T4 DNA polymerase, and  
purified by ethanol-precipitation. The cDNAs were ligated  
to lone-linker Lr-Sal4, purified by phenol/chloroform, and  
separated from free linkers by Centricon 100. Then, the  
cDNAs were amplified by long-range high fidelity PCR using  
Ex Taq polymerase (Takara) with a primer Sal4-L. The  
products were purified by phenol/chloroform and Centricon  
100. The cDNAs were digested with SalI and NotI enzymes  
and cloned into SalI/NotI site of pSPORT1 plasmid vector.  
The DH10B E. coli host was transformed with the ligation  
mixture by the standard chemical method. The average  
insert size is about 1.5 kb. The library was constructed  
by Yulan Piao(NIA)."

/note="Organ: brain; Vector: pT713D (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Eco RI; 1st strand cDNA was primed with a Not I - oligo(dT) primer [5' TGTTACCAATCTGAAGTCGAGCGCGCCGCTTTTCTTTTCTTTT 3'], double-stranded cDNA was size selected, ligated to Eco RI adapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT713 vector (Pharmacia). Library went through one round of normalization to a Cot = 53. Library constructed by Bento Soares and M. Fatima Bonaldo. The adult brain RNA was provided by Dr. Donald H. Gilden. Tissue was acquired 17-18 hours after death which occurred in consequence of a ruptured aortic aneurysm. RNA was prepared from a pool of tissues representing the following areas of the brain: frontal, parietal, temporal and occipital cortex from the left and right hemispheres, subcortical white matter, basal ganglia, thalamus, cerebellum, midbrain, pons and medulla."

/note="Site 1: SalI; Site 2: BamHI; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' GAGAGAGAGATCCAGAGCTCTTTTCTTTTCTTTT 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 20.0 and subtraction to Rot = 459.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGAGATCTTCAGATTAATTAATTCCTCCCTCCCTCC 3']. cDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda PLC I. -Retina RNA was provided by Stefano Giarinich, Department of Neurobiology, Harvard Medical School, 220 Longwood Ave., Boston, MA 02115, USA, whose assistance we gratefully acknowledge."

Program, NIH (<http://igsn.gsc.nia.nih.gov/cdna>). This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were obtained from Drs. Dennis Taub, Dan Longo (National Institute on Aging, USA), Jonathan Keller (National Cancer Institute, USA). Double-stranded cDNAs were synthesized with an Oligo(dT) primer (Invitrogen: 5'-pGACTGATCTTTCATCGGAGCGCCGCTTTT-3') from 4.8 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to lone-linker IL-Sal4, purified by phenol/chloroform, and separated from free linkers by centrifugation 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Taq polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pSPORT plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 2.7 kb. The library was constructed by Yulan Piao (NIA)."

This is a long-transcript enriched cDNA library (Ref. Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total RNAs were obtained from Dr. Mark G. Carter (NIH/NIA-IRP). EG cells were cultured at 37. C, 5% CO2 in DMEM supplemented with 15% ES cell-qualified FBS, 0.1mM non-essential amino acids, 1 mM glutamine, penicillin/streptomycin, 1 mM sodium pyruvate, 0.1 mM beta-mercaptoethanol, and 1000000 units of LIF per liter. Double-stranded cDNAs were synthesized with an Oligo(dT) primer (Invitrogen):  
 5'-POACTAGTCTAGATCGGCGCGCCGCTTTT-3' from 2.5 ug of total RNA, treated with T4 DNA polymerase, and purified by ethanol-precipitation. The cDNAs were ligated to lone-linker LR-Sa14, purified by phenol/chloroform, and separated from free linkers by Centricon 100. Then, the cDNAs were amplified by long-range high fidelity PCR using Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAs were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pCMV-SPORT6 plasmid vector. The DH10B E. coli host was transformed with the ligation mixture by the standard chemical method. The average insert size is about 4.0 kb. The library was constructed by Yulan Piao."

 modified polylinker; Site\_1: EcoR I; Site\_2: Not I;  
 UT-E-C11 is a normalized cDNA library containing the  
 following tissue(s): RPE and Choroid. The library was  
 constructed according to Bernaldo, Lennon and Soares,  
 Genome Research, 6:791-806, 1996. First strand cDNA  
 synthesis was primed with an oligo-dT primer containing a  
 Not I site. Double stranded cDNA was ligated to an EcoR I  
 adaptor, digested with Not I, and cloned directionally  
 into pT73-Pac vector. The oligonucleotide used to prime  
 the synthesis of first-strand cDNA contains a library tag  
 sequence that is located between the Not I site and the  
 (dT)18 tail. The sequence tag for this library is ACCGA.  
 This library was created for the program, Gene Discovery  
 in the Visual System, supported by National Eye Institute  
 (NEI)."

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

US-08-639-080-22  
 ; Sequence 22; Application US/08639080  
 ; Patent No. 5843661

GENERAL INFORMATION:

APPLICANT: Rothmund, Paul W.K.

TITLE OF INVENTION: METHOD FOR CONSTRUCTING UNIVERSAL DNA

TITLE OF INVENTION: BASED MOLECULAR TURNING MACHINE

NUMBER OF SEQUENCES: 31

CORRESPONDENCE ADDRESSES:

ADDRESSEE: Fish & Richardson P.C.  
STREET: 4225 Executive Square, Ste 1400  
CITY: La Jolla  
STATE: CA  
COUNTRY: USA  
ZIP: 92037

Patent No. 6548244  
GENERAL INFORMATION:  
APPLICANT: MAERTENS, GEERT; STUYVER, LIEVEN;  
ROSSAU, RUDI; VAN HEUVERSWYN, HUGO  
TITLE OF INVENTION: PROCESS FOR TYPING OF HCV  
ISOLATES  
NUMBER OF SEQUENCES: 97  
CORRESPONDENCE ADDRESS:  
ADDRESSEE: BIERMAN & MUSERLIAN  
STREET: 600 THIRD AVENUE  
CITY: NEW YORK  
STATE: NEW YORK  
COUNTRY: USA  
ZIP: 10016  
COMPUTER READABLE FORM:  
MEDIUM TYPE: floppy disk  
COMPUTER: IBM PC compatible  
OPERATING SYSTEM: PC-DOS/MS-DOS  
SOFTWARE: ASCII  
CURRENT APPLICATION DATA:  
APPLICATION NUMBER: US/09/899,044  
FILING DATE: 06-Jul-2001  
CLASSIFICATION: <Unknown>  
PRIOR APPLICATION DATA:  
APPLICATION NUMBER: 09/378,900  
FILING DATE: <Unknown>  
APPLICATION NUMBER: PCT/EP93/03325  
FILING DATE: 26-Nov-1993  
APPLICATION NUMBER: EP/93/402,129.6  
FILING DATE: 31-Aug-1993  
APPLICATION NUMBER: EP/92/403,222.0  
FILING DATE: 27-Nov-1992  
ATTORNEY/AGENT INFORMATION:  
NAME: CHARLES A. MUSERLIAN  
REGISTRATION NUMBER: 19,683  
REFERENCE/DOCKET NUMBER: 410,004  
TELECOMMUNICATION INFORMATION:  
TELEPHONE: (212) 661-8000  
TELEFAX: (212) 661-8002  
INFORMATION FOR SEQ ID NO: 75:  
SEQUENCE CHARACTERISTICS:  
LENGTH: 177 base pairs  
TYPE: nucleic acid  
STRANDEDNESS: single  
TOPOLOGY: linear  
MOLECULE TYPE: cDNA  
IMMEDIATE SOURCE:

CLONE: gb487  
POSITION IN GENOME:  
MAP POSITION: 5' untranslated region  
SEQUENCE DESCRIPTION: SEQ ID NO: 75:  
US-09-899-044-75

Query Match 66.7%; Score 12; DB 4; Length 177;  
Best Local Similarity 83.3%; Pred. No. 7.4e+02;  
Matches 10; Conservative 2; Mismatches 0; Indels 0; Gaps 0;

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

PRIOR APPLICATION DATA:  
APPLICATION NUMBER: EP/92/403,222.0  
FILING DATE: 27-NOV-1992  
ATTORNEY/AGENT INFORMATION:  
NAME: CHARLES A. MUSERLIAN  
REGISTRATION NUMBER: 19,683  
REFERENCE/DOCKET NUMBER: 410.004  
TELECOMMUNICATION INFORMATION:  
TELEPHONE: (212) 661-8000  
TELEFAX: (212) 661-8002  
INFORMATION FOR SEQ ID NO: 59:  
SEQUENCE CHARACTERISTICS:  
LENGTH: 178 base pairs  
TYPE: nucleic acid  
STRANDEDNESS: single  
TOPOLOGY: linear  
MOLECULE TYPE: cDNA  
IMMEDIATE SOURCE:  
CLONE: bu74  
POSITION IN GENOME:  
MAP POSITION: 5' untranslated region  
US-09-294-121A-59

Query Match 66.7%; Score 12; DB 9; Length 178;  
Best Local Similarity 83.3%; Pred. No. 7.2e+02;  
Matches 10; Conservative 2; Mismatches 0; Indels 0; Gaps 0;
